Education

Sepuluh Nopember Institute Of Technology

Expected Graduation: August 2026

Bachelor's of Engineering Physics

Surabaya, Indonesia

- GPA : 3.27/4.00

- Related Courses: Computer Programming, Engineering Mathematics, Logic and Digital Systems, Artificial Neural Networks

Work Experiences

PT. Pertamina EP Cepu

January – May 2025

AI Engineer Intern

Cepu, Central Java

- Developed an integrated Deep Learning Model **LSTM Autoencoder** anomaly detection system for solvent pumps **P9027, P2025, P9011** to identify early signs of mechanical seal leak failures, contributing to **zero lost production hours (LPO) at 241-P9027**.
- Processed and analyzed **5,000+** anomaly events from multivariate pump sensor data, **collaborating with field operators** to validate and using **supervised machine learning to categorize anomalies** with **85% validation accuracy**.
- Implemented **rule-based logic** using pump specifications and operator knowledge to **support early warnings** and prescriptive maintenance actions, helping **reduce operational risk** and achieve potential cost savings of up to **USD 476,157**.

Embedded System and Cyber Physical Laboratory (ECS)

June 2024 – July 2025

IT Project Manager (March 2025 – July 2025)

Surabaya, Indonesia

- Led the end-to-end development planning of ECS Website 2.0, coordinating developers and designers through **Agile workflows** using **ClickUp, Discord, and Excel-based timelines** to align project delivery with team capability.
- Developed a comprehensive **Business Requirement Document (BRD)** covering feature scope, technical tools, hosting costs, subdomain planning, and development priorities to support maintainability and future expansion.

Tech Lead Frontend (June 2024 – November 2024)

Surabaya, Indonesia

- Led frontend development for the ECS **official website** and **EPTA annual event portal**, supporting **100+ event participants** through responsive interfaces built with **Next.js** and **Tailwind CSS**.
- Built **reusable UI components** and **integrated REST API** endpoints for key EPTA features, including user authentication, registration, module uploads, certificate uploads, assignments, and task submissions.

Projects

EMQNET: Towards Multi-Task Deep Learning for Earthquake Precursors | [Source Code](#)

Python | Pytorch

- Designed and developed a **CNN multi-task deep learning pipeline (EMQNET)** using **electromagnetic data** from BMKG (Indonesia's Meteorological, Climatological, and Geophysical Agency).
- Using **Pytorch Neural Networks** to Built a three-head classification model to predict: **(1) precursor detection, (2) earthquake magnitude, and (3) azimuth direction**.

PUMP SENTINEL: Industrial Pump Failure Prediction System | [Source Code](#)

Python | Tensorflow | Python Rule Engine

- Developed an industrial pump failure prediction system using an LSTM Autoencoder to detect abnormal pump behavior from multivariate time-series sensor data.
- Developing LLM-based maintenance assistants, enabling engineers to query historical anomalies, equipment manuals, and operating procedures through natural language interactions.
- Designing the next phase of the system for production deployment, with plans to integrate intelligent agent-based maintenance assistance for automated anomaly interpretation and operational decision support.

DERMSIGHT: AI-Based Skin Disease Classification System | [Source Code](#)

Python | Tensorflow | CNN | OpenCV

- Developed a computer vision-based skin disease classification system to assist early screening using dermatology image data.
- Built and trained a CNN-based image classification model with preprocessing and augmentation techniques to improve model robustness and generalization.
- Designed the project as an AI-assisted diagnostic support tool, focusing on clear prediction outputs and future integration into a user-facing web application.

Technical Skills

Languages: Python, Javascript, Typescript, SQL, HTML5, CSS, Golang.

Developer Tools: Postman, Git, Docker, Prisma, Supabase, TensorBoard, Cloudflare, Ollama, Clickup.

Libraries/Frameworks: ReactJS, NextJS, NodeJS, ExpressJS, NestJS, PostgreSQL, FASTAPI, TensorFlow, Pytorch, Scikit-Learn, CV2, LangChain.
